

GaedKeeper is a solution to store, track and analyze energy consumption data and produce audit reports and recommended solutions to save energy. It is an autonomous energy intelligence system on the blockchain with artificial intelligence embedded along with compliance certification.

Web App Features

- Created an ecosystem that provides an evaluation of your current energy consumption practices, identify areas for improvements, and give suggestions based on your practices to help you save money and electricity
- Created a proprietary energy efficiency rating system that relies on real-world data and information analytics
- Developed a system where audits will be verified with tokenized certificates
- Generated audit reports using artificial intelligence and recommend solutions to lower the energy consumption
- Automated the data analysis (Energy conservation, methods calculations, charts, and graphs, returns of investments)
- Data collection on blockchain (Billing schedules, inventories, existing ECMs, equipment and data)
