

PumaPay's merchant portal is an intuitive user-friendly interface, a one-stop-shop for merchants to register, set up their billing scenarios and pricing models, and start billing conveniently in their native currency. The portal uses PumaPay's carefully designed APIs with built-in features that help merchants create the best payment solution for their customers.

## Web App Features

- The Business can onboard with PumaPay and start offering the solution for the customers
- The app has an 'PullPayment' execution, which is based on the Payment Model created by the Business, and determines the parameters of the payment. For instance: whether the payment will be recurring (subscription), if it will have a trial period, what is the amount that the customer needs to pay, how often the payments will be made, etc.
- Every time a customer executes a payment with the PumaPay payment solution a new PullPayment will be generated with a unique PullPayment ID and will have the relative information of the Payment Model and payment information

## Tech Stack

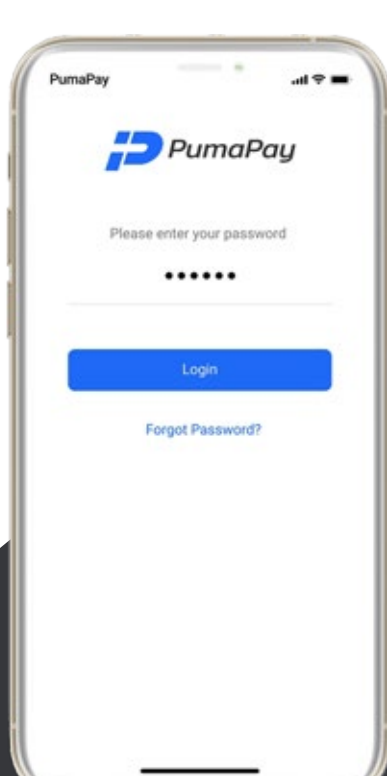

PumaPay crypto wallet ensures the best user experience while capitalizing on the cryptocurrency value. The wallet comes with a set of groundbreaking features to facilitate recurring transactions for the first time on the Ethereum network. Supporting all ERC20 tokens, this wallet app lets the user convert, store, receive, and send their favorite cryptocurrencies.

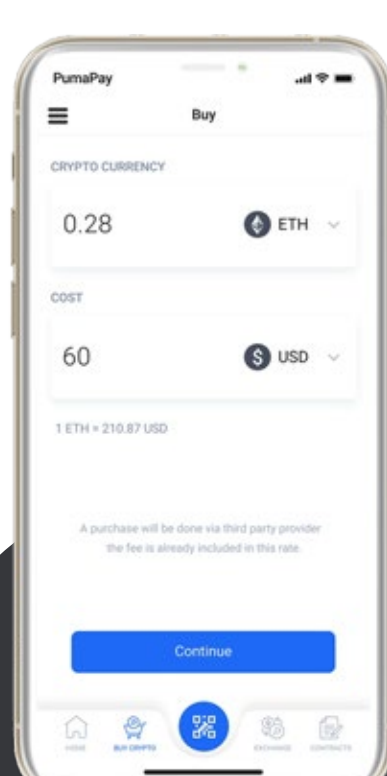

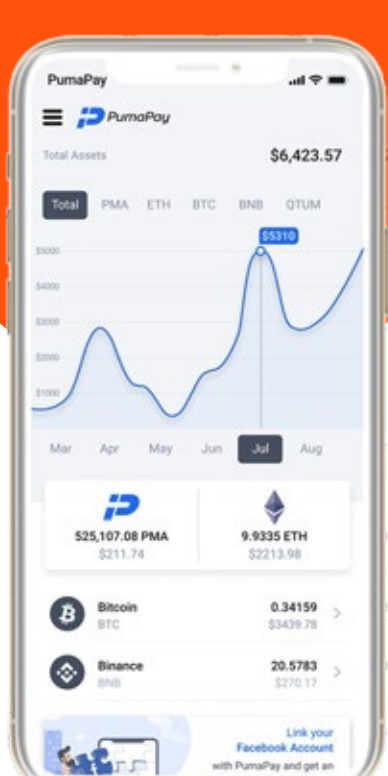

## Features

- Easy share feature for the users to share their payment address
- Users can create a new wallet or access their existing one
- Simplified registration process with bank-level security
- Supports multiple cryptocurrencies
