

VeriShare

Approval, signing and formal e-delivery of
authentic sensitive documents

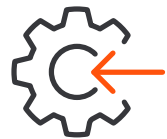

deqode.

Problem

Sharing, verification and reconciliation of sensitive documents between multiple parties has four major issues:

Accessibility

Due to privacy risks, sending and receiving confidential documents using the current technology is not safe

Trust

If there are multiple institutions involved in sharing of the documents, there needs to be a trust layer between them

Cost

There are huge costs involved for document distribution services

Time

The current process is manual and time-consuming, which substantially drains the organizations' resources

VeriShare Solution

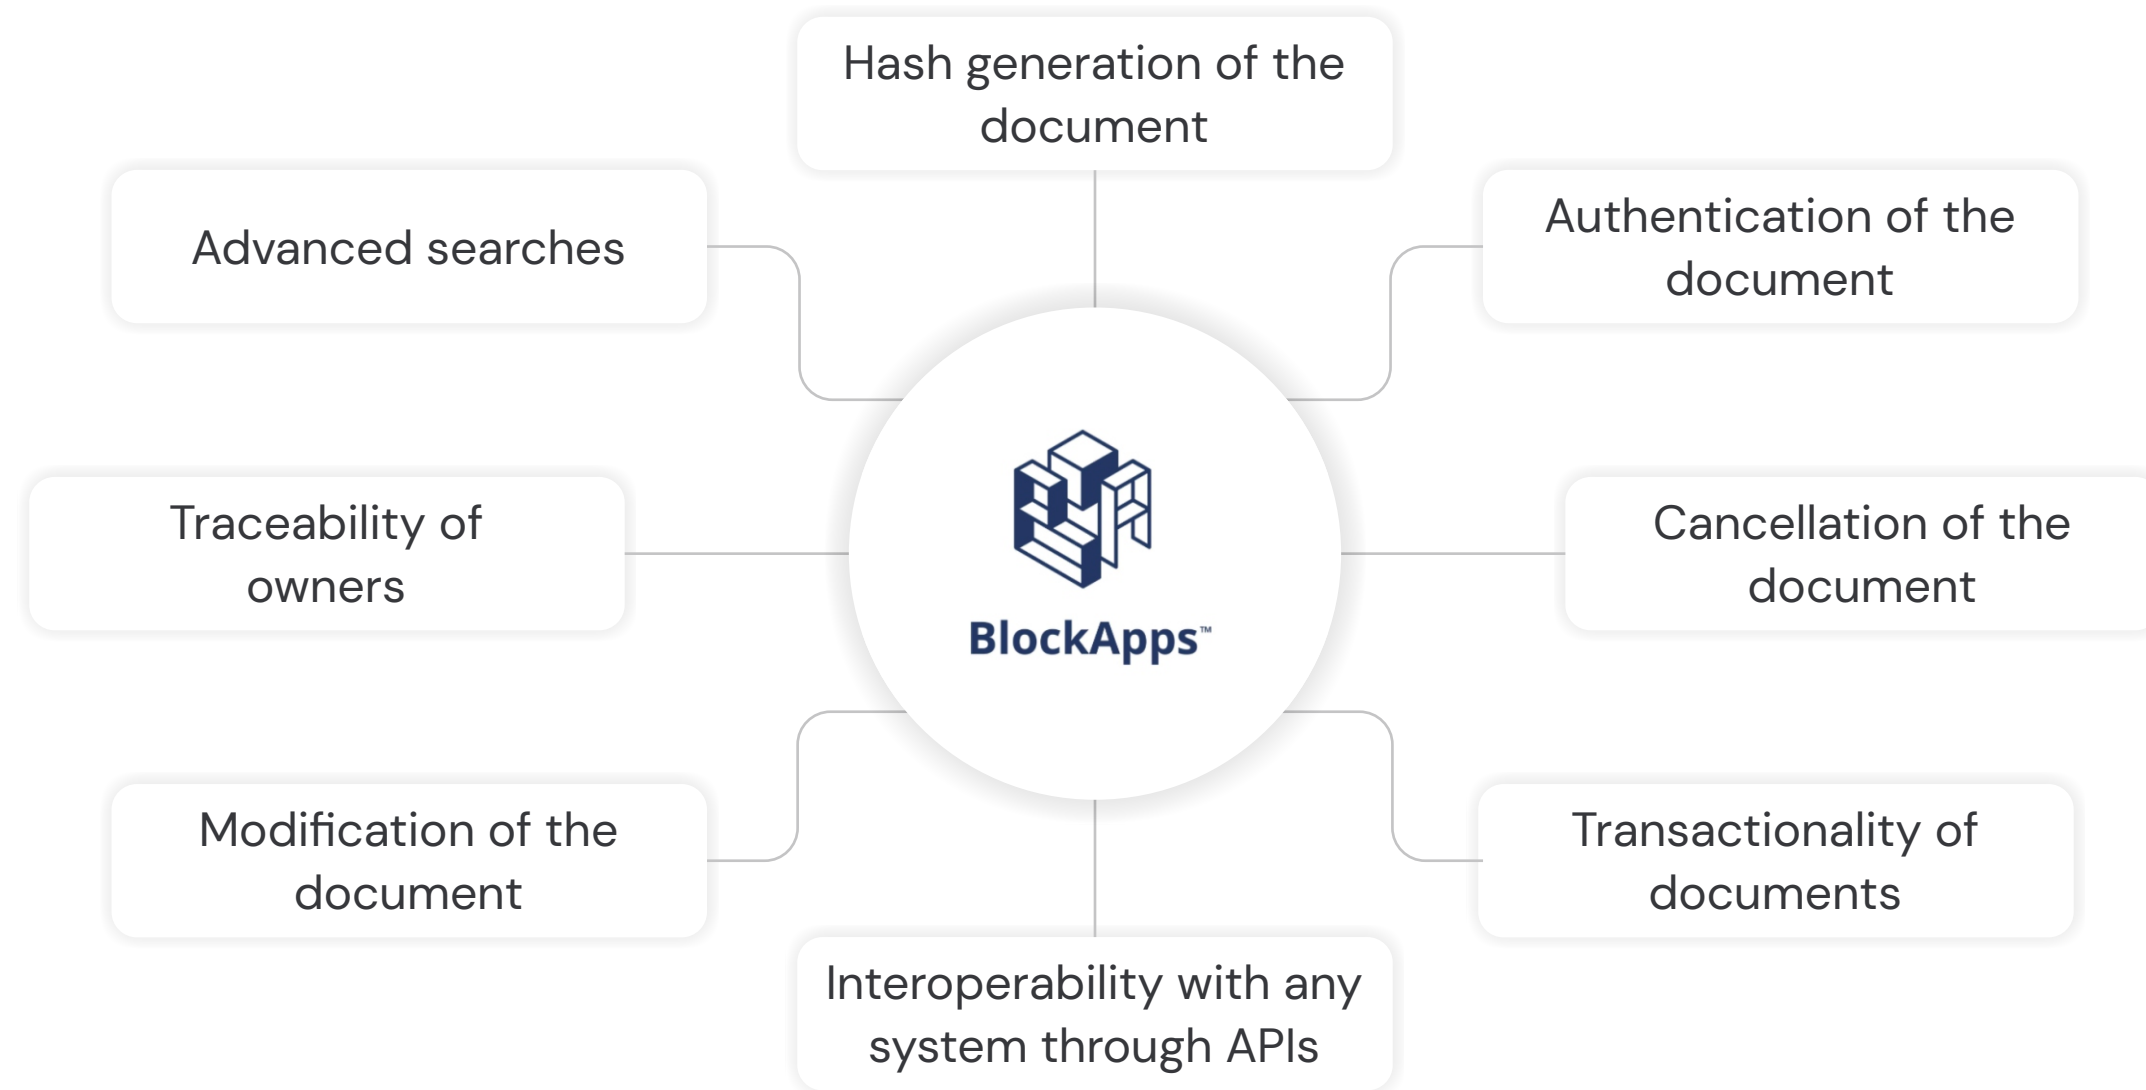

VeriShare is an electronic document sharing and attesting platform that allows organizations to safely share, verify and reconcile documents in real-time.

It is a Strato-powered system which:

- 01 Shares data on a need to know basis for the customer
- 02 Identifies the source of a document
- 03 Provides a complete audit trail of how the document was verified, thereby ensuring complete provenance tracking

Characteristics

Key Functions

Sharing, verification and reconciliation of sensitive documents between multiple parties has four major issues:

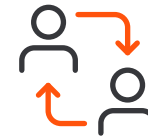

Upload

Uploading the document

Access

Document sharing on a need to know basis with access levels

Transfer

Transferring document ownership

Attest

Verification and attestation of the document

Update

Updating or deleting the documents

Freeze

Freezing of documents – blocking unauthorized action on the document

Provenance

Getting the complete document track history and details

About Deqode

At Deqode, our purpose is to help businesses solve complex problems using new-age technologies. We are industry leaders in blockchain solutions and we leverage our deep industry knowledge and technical expertise to optimise business processes, maximize impact and foster business growth. We are driven by our passion to innovate and create solutions that inspire the future.
